Even the smallest details pay you back with increased energy savings, weather performance and low-maintenance.

The **Generations Energy Wise™** Glass System combines a dual-sealed silicone foam Super Spacer®, Low-E soft coat, and a double-glazed 1" insulated glass unit with argon gas between the double strength glass panes for exceptional home comfort and energy conservation.

A range of energy-efficient glass options to help keep your home comfortable, summer through winter.

The **Generations Energy Wise™ Plus** Glass System combines dual-sealed silicone foam Super Spacer®, 2 coats of Low-E soft coat, and a triple-glazed 1" insulated glass unit with heavier krypton gas between the double strength glass panes for maximum energy performance.

The **Generations Energy Wise™ Secure** Glass System includes everything inside the Energy Wise™ Plus Glass—and a clear laminated panel sandwiched between 2 panes of single strength glass. When struck with force the glass will shatter, but the panes remain adhered to the laminated panel and will not fall inside the home. The laminated panel is very difficult to penetrate, providing the ultimate in window security, making this glass package a great choice for use around doors and in windows in your basement and on the first floor of your home.

## Features.

### 1 - WELDED FRAME AND SASH

Profiles are fused together to create a weathertight, one-piece unit

### 2 - SLOPED SILL

The patented, triple-stepped, sloped sill design forces water away from the window

### 3 - LAP-LOK MEETING RAIL

Overlapping, interlocking meeting rail virtually eliminates air and water infiltration where the sash meet

### 4 - MULTI-CHAMBERED PROFILES

Dead-air chambers inside the vinyl profiles create small, airtight pockets for increased insulation

### 5 - DUAL FIN WEATHERSTRIPPING

Creates a weather-resistant seal around operating sash

### 6 - COIL SPRING BALANCE SYSTEM

Ensures easy sash movement and holds the window in any open position

### 7 - DUAL AIR LOCKS

Allow windows to stay partially open for ventilation

### 8 - SUPER SPACER

Our solid silicone foam glass spacer is more thermally efficient, and flexes with temperature fluctuations to reduce glass seal failure

### FRENCH SLIDING AND SWING DOORS

Feature Inswing, Outswing and Sliding Doors to complement any architectural style or setting
